

GIVETH

Where giving **gives back**

Giveth is rewarding and empowering those
who give to projects, to society, and to the world!

The Opportunity

\$25 trillion/yr

SPENT worldwide on
Public Goods

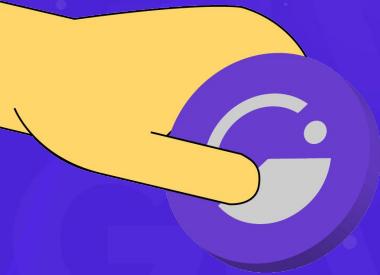

Over 25x Total Crypto Market Cap

The 30 year Giveth Roadmap

- 1. Evolve the nonprofit space**
- 2. Provide the government services that people actually want**
- 3. Top down control loses legitimacy and fades away peacefully**

Where do we start?

**When governments fail to provide
Public Goods that are in demand,
people start nonprofits.**

Nonprofits

~\$500 Billion/yr

is donated
in the US
alone

Using web3 to evolve philanthropy

Giveth has the **best donation platform** in the world & more!

Donations go to projects where they keep 100% of proceeds.

Donors are rewarded with **GIVbacks**.
(Incentive program that rewards donors with GIV.)

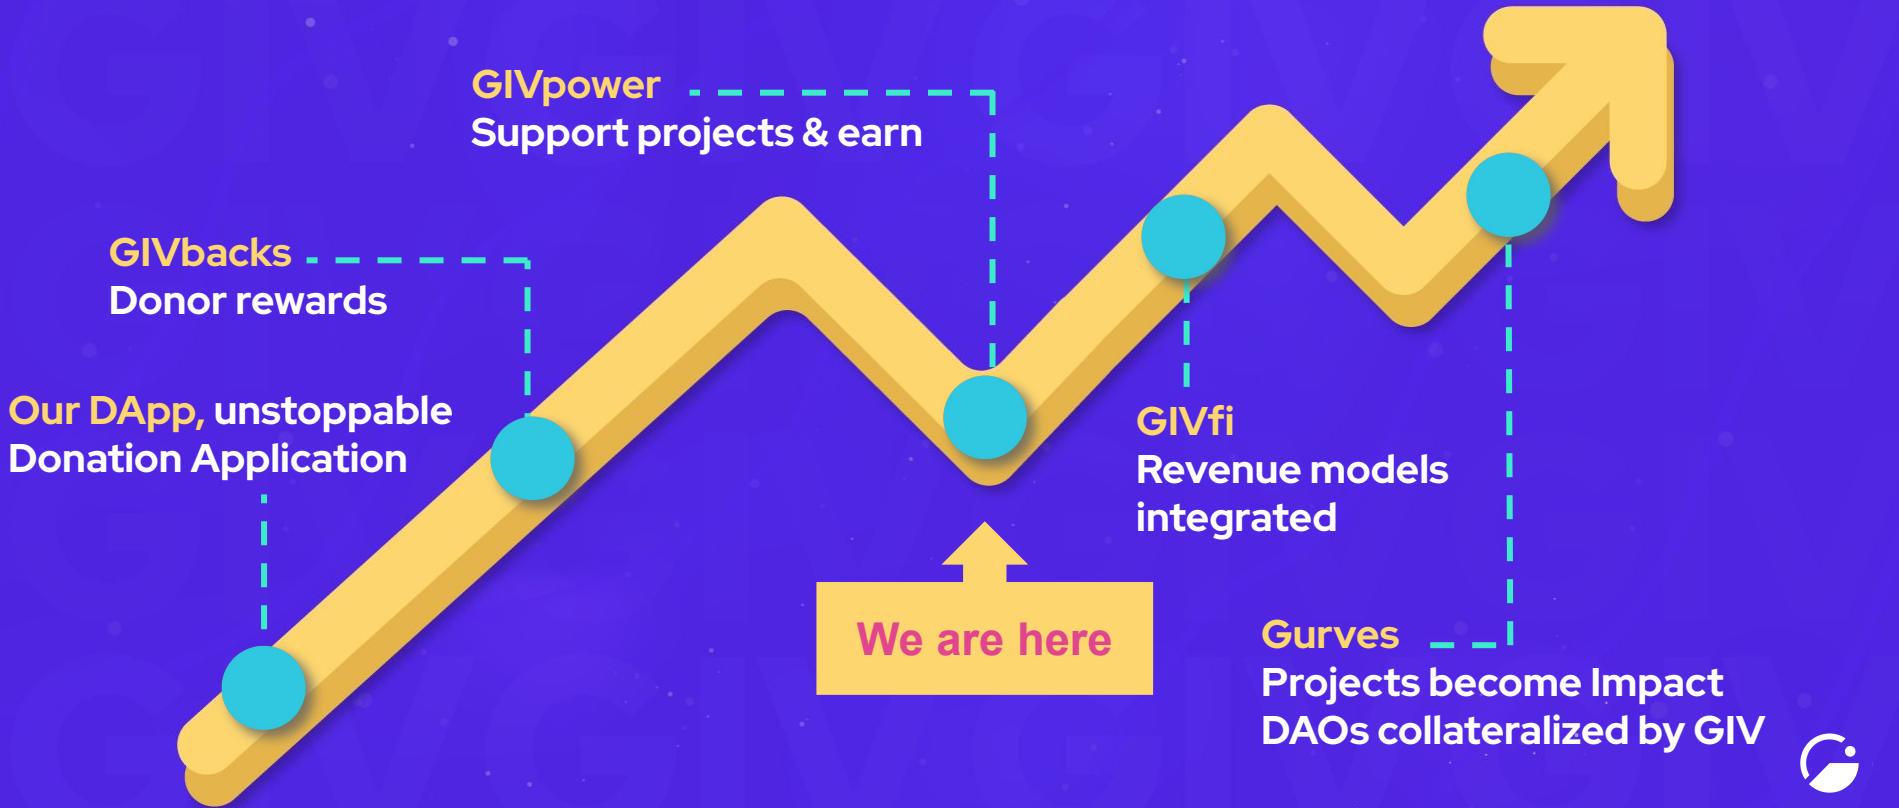

GIV holders can earn a yield participating in the **GIVeconomy**.

ReFi organizations can build liquidity with **Regen Farms**.

The 3 year Giveth Roadmap

Building the Future of Giving

Our intention is to support and reward the funding of public goods by creating open, transparent and free access to the revolutionary funding opportunities available within the web3 ecosystem.

DAO & TECHNICAL METRICS

Product/service: Giveth, GIVmatching, Regen farms, GIVpower, GIVstream, GIVfi

Age: 6 years

Legal structure: DAO (builders across USA, South America, Europe, Middle-East, Asia)

Treasury structure: Safes on Mainnet and Gnosis Chain (diversified), GIVgarden, nrGIV

Revenue streams: Grants, donations, and soon interest generated by GIVfi - Potential for fees on donations when we scale.

Core architecture:
<https://github.com/Giveth/giveth-docs>

Voting: GIVpower Boosting, Snapshot, Gardens, AragonDAO, Tokenlog

TREASURY & COMMUNITY

No. of proposals: +150

Proposal threshold: 1 million GIV quorum on snapshot

Vote participation: ~3-5% of eligible GIV

Token distribution: 1 billion total supply; ~70 million GIV currently circulating distributed through GIVdrop, GIVbacks, GIVfarm & GIVstream

Governance Token holders: 1,291 addresses

Active members: 72

Commitment of contributors: Several contributor levels (stewards, senior token engineers, senior smart contract developers), In total approx 24 FTEs + 30 PTEs + 18 regular active community contributors paid project to project or volunteering

Social Media outreach: 11k Twitter followers

Our growth plan - the best is yet to come

2022

Angel Vault and path to our stable token (oneGIV) To create more liquidity, we have launched oneGIV and the Giveth Angel Vault. This way we can protect the value of GIV for GIVbacks, the GIVgarden & all our future ventures. oneGIV is our own branded stablecoin and will be used throughout the GIVeconomy.

2022

GIVpower GIV holders will be able to lock their tokens to BOOST projects asking for donations on our platform. The longer they lock, the more their favorite projects are BOOSTED and the higher their own staking APR.

2023

GIVfi Fees will be integrated into the platform and funds on the platform from latent donations, endowments & savings accounts will be put into safe defi strategies. The interest will buy GIV on the open market.

Future

Gurves: Regen microeconomies powered by GIV With the GIV staked behind projects via GIVpower, we can enable for-good projects to launch their own microeconomies backed by GIV in a bonding curve. Donors become investors, volunteers become shareholders with a voice, and Giveth.io becomes the place to go for seed round impact investments.
The Future of Giving is Investing.

GIVfi

Bringing defi to nonprofits

GIVfi + GIVmatching

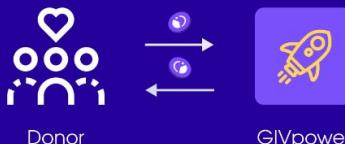

Donate to a cause, receive GIVbacks

1

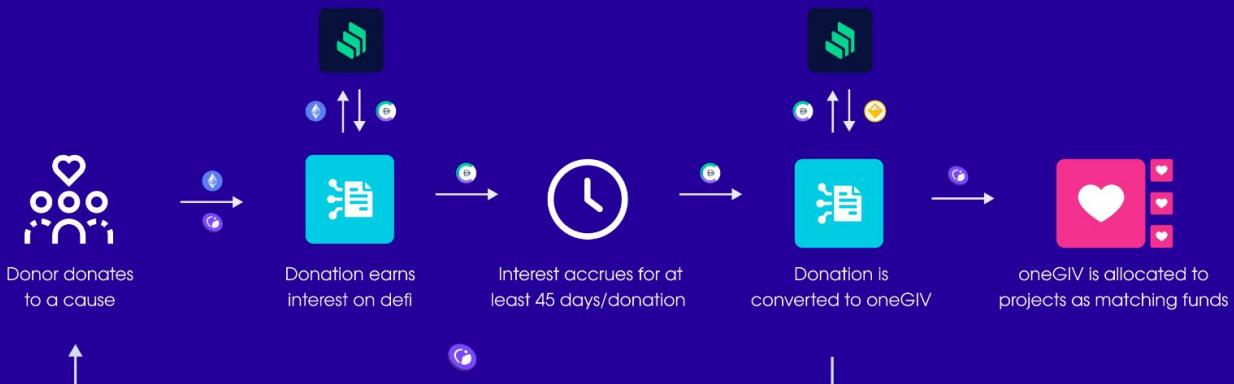

Lock GIV to earn more GIV

2

GIVmatching Tokenomics

Interest accrued is used to buy GIV, benefitting all GIV holders

GIVfi has several pieces

Default of 5% of every donation donated to Giveth. (Can opt-out.)

Latent donations on Giveth earn interest on defi to buy GIV & become a high interest rate savings account for projects.

Mandatory Fee switch integrated to base layer controlled by GIV token holders.

oneGIV gets integrated into the system to create demand for GIV.

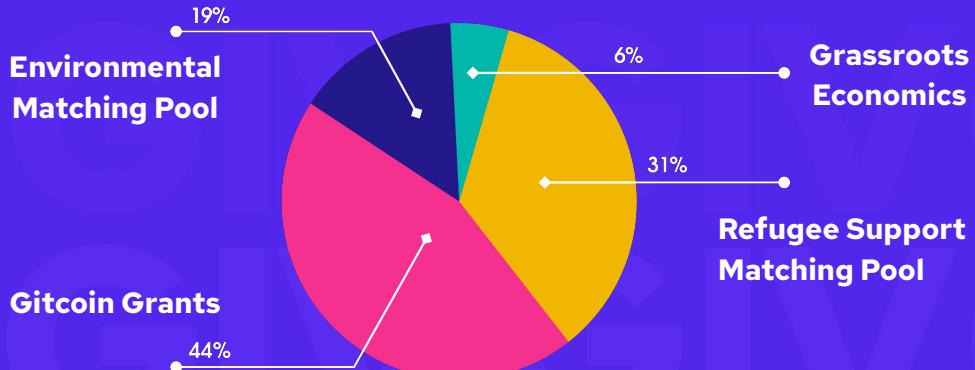

GIVfi brings revenue and economic demand for the GIV token, however, this is just the beginning.

GIVfi Opens up GIVdowments

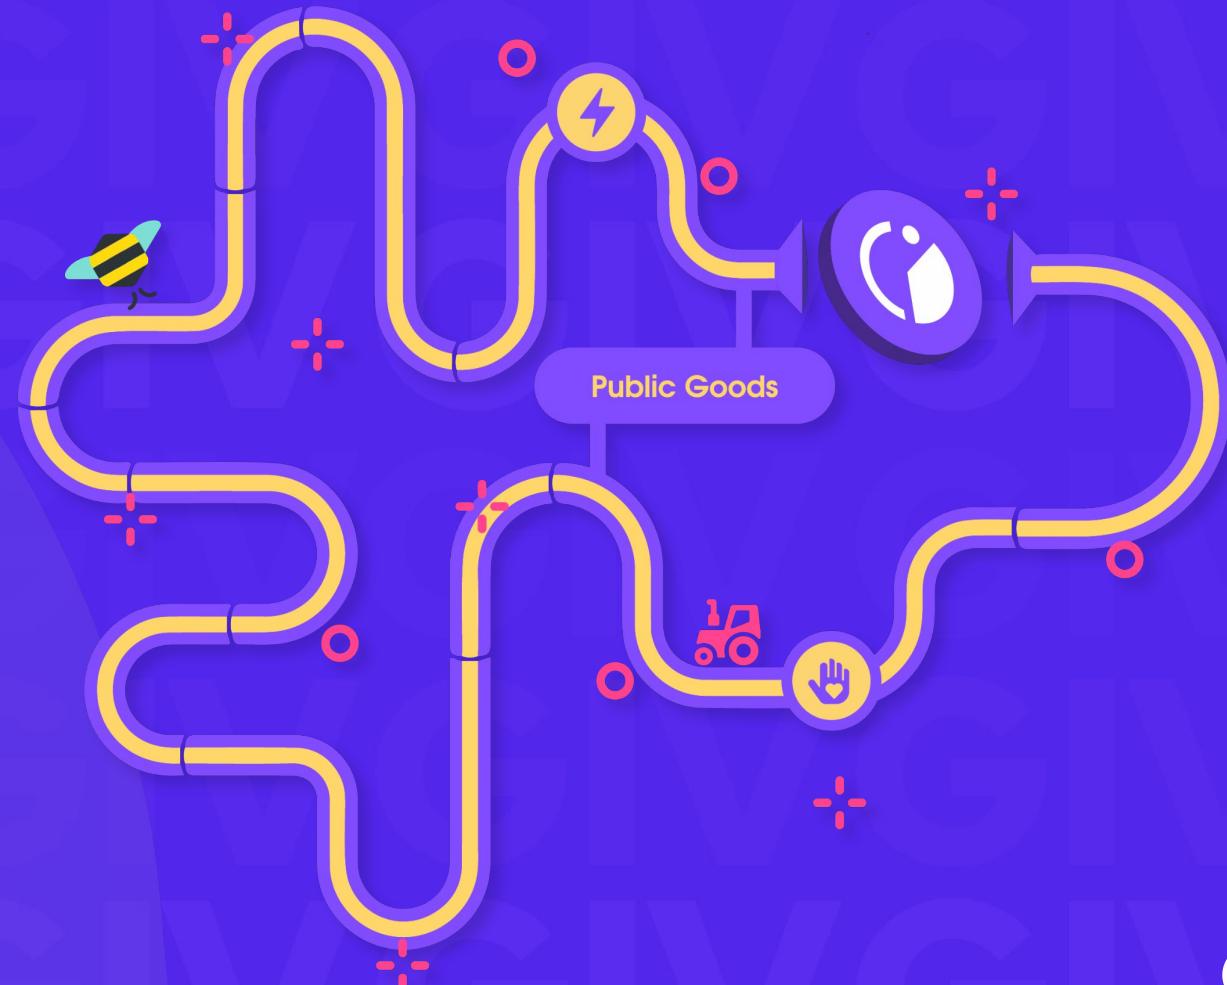

GIVfi opens up the ability for the nearly 2 trillion dollars worth of tradfi endowments to easily start earning interest in defi and automate the allocation of those funds to projects on our platform.

Also, any project can start their own GIVdowment, where 100% of the interest they earn goes straight into their project. This will beat any interest they could earn in a tradfi savings account by many multiples.

Choose where your interest goes

The Path to Gurves

Gurves

The Future of Giving is Investing

Gurves will transform Giveth from a donation platform into an impact investment platform. Innovators in the nonprofit space will be able to capitalize on their idea and find seed capital on the platform to create their own token, collateralized by GIV.

Traditional foundations will have an opportunity to diversify their endowments into novel impact investments. There were over \$1.7 TRILLION USD in endowments in 2017 in the US alone, and the number has likely grown since then. If only $\frac{1}{4}$ of 1 percent of these funds allocated to Impact DAOs on our platform, this would be over \$4 billion USD of demand for GIV.

And that is only one of many potential organizations that would have an opportunity to invest instead of donate in their favorite nonprofit causes.

Giveth DAO

Griff Green

co-Founder of the Commons Stack, Giveth.io. Also co-founder of DAppNode and White Hat Group (WHG).

Lauren Luz

Giveth communications lead and GIVeconomy product manager.

Eduardo Antuña

DAppNode co-founder and project lead. Ethereum DevOps and Solidity developer.

Jordi Baylina

co-founder of Giveth, DAppNode and founder and technical lead of Polygon Hermez' zkEVM and iden3.

Head of Decentralization at Fox Foundation. Former CEO @bitfract acq: ShapeShift @JustLegal acq: DigitalTown.

Oleksii Matiasevych

Ethereum architect, smart contracts engineer.

...and 50+ Giveth contributors

We are raising \$2 mil USD

We are selling up to 12% of our token supply at a discount.

Buy GIV at a 20% discounted rate, and stake it with a higher reward in GIVpower while retaining governance.

Market cap	1.8 Mil USD
FDV	21 Mil USD
GIV price	\$0.017
Discount	20%
Total GIV for sale	119 Mil
% of total supply	12%

We want to work with **YOU** to structure this opportunity. We are builders and need the investment perspective to finalize the structure of the offer.

Join us in Building the
Future of Giving

Thank you

45% of crypto users donate at least \$1,000 to charity yearly...

...while only 33% of the general investor population gives \$1,000 or more to charity annually. This fact suggests that the average crypto donor is uniquely generous, as compared to the average cash donor.

Given the crypto market outlook, user and nonprofit adoption growth, and innovations in fundraising, crypto has the potential to become the most powerful philanthropic force on the planet in the years ahead.

In 2021, the largest source of charitable giving came from individuals, who gave \$326.87 billion, representing 67% of total USD giving.

gratitude.**

Gurves

Gurves are Only Given to the Best!

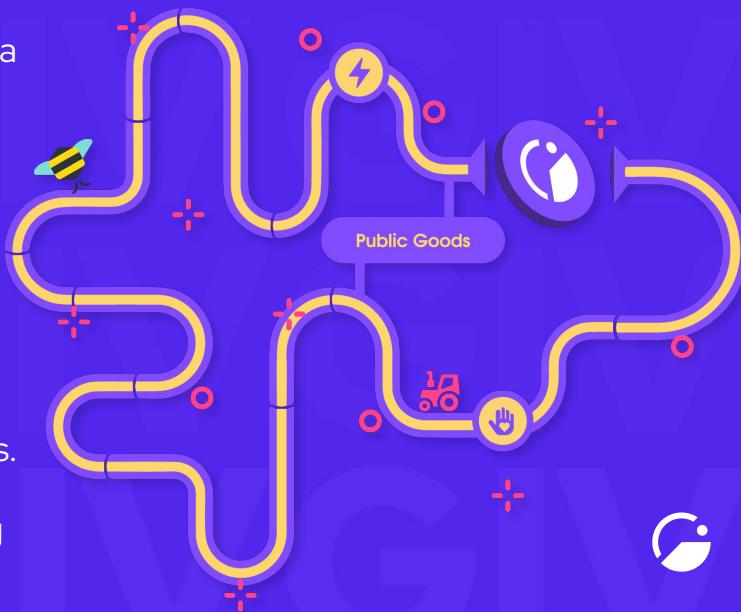

The projects with the most GIV locked behind them will be supported in DAOifying their project, first with a Reputation DAO, governing their donations. When that succeeds, and a strategy for creating demand for a token can be structured, then we will help that project launch a Gurve. This mimics a traditional investment pattern but with advanced token engineering patterns built in, for integrating donations and investments together.

GIVpower becomes seed collateral. The GIV locked behind the project can collateralize the issuance of a new token for the project via a Giveth bonding curve aka Gurve. These 1st supporters get discounted PROJ.

Hatch as a Series A. Additional capital for a project's DAO can be raised right before launch. All \$PROJ issued at launch will be locked.

\$PROJ distributed fairly. The community supporting the project as a nonprofit has earned reputation tokens and will be given locked \$PROJ. Labor, expertise and capital all have upside and shared success.

Continuous Series B. Anyone can now invest into the DAO by sending GIV to the Gurve to issue liquid PROJ, raising the price of PROJ.

Where giving **gives back**

Giveth offers lucrative rewards to donors while attracting and rewarding long-term holders

The **GIVfarm** provides various liquidity farms on Mainnet and Gnosis Chain – as well as single asset GIV staking on Gnosis Chain.

The APRs are high without hurting our economy in the short term because of our **GIVstream**. When you harvest rewards from the GIVfarm you are not only earning instantly claimable rewards but also receiving and augmenting your own personal continuous stream of GIV.

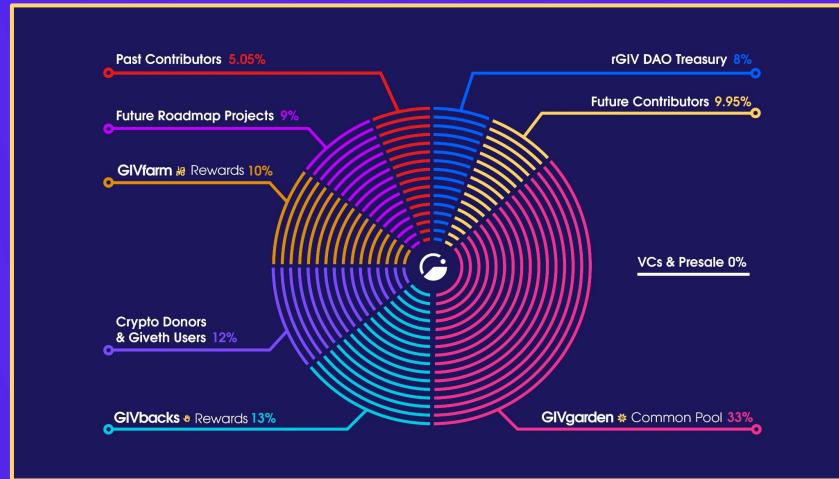

GIV is the governance token that fuels and directs the GIVeconomy

Our community can participate in the GIVeconomy in the following ways:

- From December 24, 2021 onward, eligible recipients can claim their **GIVdrop** on Gnosis Chain.
- Donors to verified projects on Giveth get rewards from **GIVbacks**.
- Liquidity providers and stakers can earn rewards in the **GIVfarm**.
- All GIV holders can create and/or vote on proposals in the **GIVgarden**.
- Anyone who claims GIV from their participation in the GIVeconomy gets a continuous flow of GIV from the **GIVstream** until December 23, 2026.

An amount of 1 billion GIV tokens were minted at the onset of the GIVeconomy. 90% of the GIV was put into the GIVstream and is being released continuously throughout the entire "GIViverse" over a period of 5 years (until December 23, 2026).

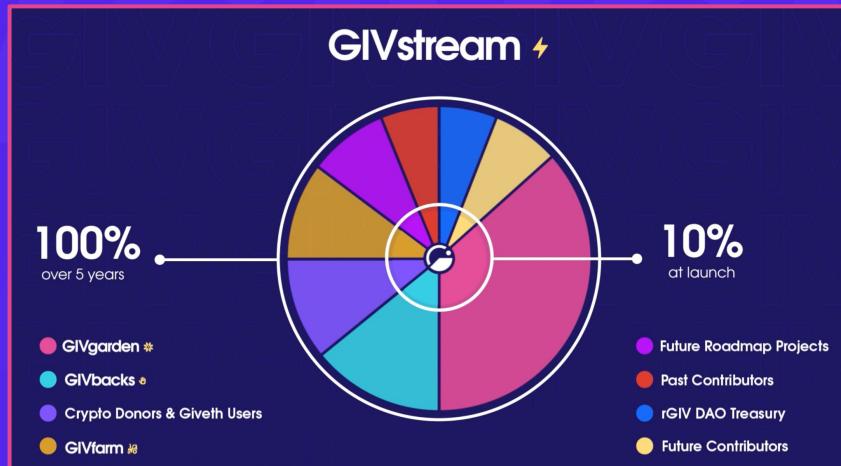

The distribution of the total supply of GIV throughout the GIViverse

The **GIVstream** aligns community members with the long term success of Giveth and the GIVeconomy

With the **GIVstream**, anyone who adds value to the GIVeconomy receives GIV continuously for up to 5 years from the GIVeconomy launch date. GIV is rewarded through participation in the GIVeconomy, part will be liquid and part will add to GIVstream flowrate. As the GIVeconomy grows & stabilizes, more GIV becomes liquid and available for everyone.

- GIVstream flowrate is the rate (GIV/week) at which GIV becomes liquid.
- On Gnosis Chain, GIVstream flowrates are given (or increased) by donating and getting GIVbacks, wrapping GIV to use in the GIVgarden, or staking in the GIVfarm. On Ethereum mainnet by providing mainnet liquidity and staking GIV or LP tokens in the GIVfarm on Mainnet.

The GIVstream nurtures the GIVeconomy at inception by having only 10% of the total supply of GIV liquid and transferrable to start.

The GIVgarden, the DAO governance platform

Giveth has chosen the Gardens DAO governance platform developed in partnership with 1hive to allow GIV token holders to manage the DAO configurations and allocate funds to projects that are aligned with its mission, vision and values.

The main tools used for governance in the [GIVgarden](#) are Conviction Voting and Tao Voting.

- The unique feature of **Conviction Voting** is that, instead of voting yes or no on proposals, you stake GIV behind proposals that align with your values.
- **Tao Voting** is a YES/NO decision making tool, with the option of delegation, that is used in the GIVgarden to make important, non-financial decisions for the DAO: updating DAO parameters, fixing bugs, adding new features to the DAO and/or for emergency situations such as an attack to the DAO treasury.

The next generation of ReFi Opportunities

Giveth is re-engineering charitable giving by creating a free, open-source platform, built on Ethereum and compatible with any EVM-Chain.

RegenFarms is the next generation of ReFi liquidity mining opportunities for DAOs and regens alike. Using our contracts for the **GIVfarm** and the **GIVstream**, we are empowering other for-good DAOs to launch liquidity mining incentive programs, "RegenFarms", with streams of their own.

Shapeshift, CultDAO & recently The Standard have all paid to be part of this program.

RegenFarms presents the next generation of ReFi liquidity mining

Using our contracts for the GIVfarm and the GIVstream, we are empowering other for-good DAOs to launch liquidity mining incentive programs, "RegenFarms", with streams of their own.

How?

Utilizing the **GIVstream**, all rewards earned in the **GIVfarm** (until December 23, 2026) include some part liquid and some part streaming. This allows the GIVfarm to offer high APRs without creating excessive sell pressure. Thanks to the GIVstream, Giveth has pioneered an elegant evolution to traditional liquidity mining that offers lucrative rewards while attracting and rewarding long-term hodlers, and keeping participants invested in the project for years to come.

We are now offering this technology as a service to other Blockchain4Good DAOs.

Shapeshift and CULTDAO's RegenFarm are open for deposits and earning rewards.
